Color	Sea Spray
Developer	Mabati Rolling Mills
Profile	Tekdek - IT5
	<p>Just as we shelter ourselves from adverse weather, so is the need to protect our motor bikes from damage that may result after long stay in the sunny or rainy environment. MRM’s main plant sits in the outskirts of the coastal town – Mariakani. a high humidity area. Each day, we innovate & bring to life solutions to the community not only to shelter you & your family but also your treasured possessions. Thus, as modernisation took centre stage to embrace new technology and as we create a better work environment, an ultra-modern car park was installed.</p> <p>The project, made from steel with offsite fabrication of a combination of tapered hot rolled & cold formed sections, was crowned with Tekdek-IT5 with a metallic finish of Colorplus sea spray to master the sunshine. This shed is an illustration of the innumerable use extensions that MRM solutions can be adopted to beyond the traditional applications. MRM hopes to target other corporates for such shelters, county government for bust stop shelters, boda boda (motorcycle) waiting sheds and similar conveniences to improve the quality of life of citizens.</p> <p>Special Features Another jewel towards, “making a world of difference”!</p>
