

PROJECT SHOWCASE

Date complete	October 2014
Project	THE RETREAT AT NGORONGORO – TANZANIA
Architect	DESIGN SOLUTIONS – TANZANIA
Roofing Contractor	HOMEZ DEVELOPMENT – KENYA
Roofing Design/Supplier	Safal Mitek Ltd
Truss Material	Ultra-Span Light Gauge Steel Trusses
Special design features	Manufactured out of ZincAL AZ 150 1.2mm from Mabati Rolling Mills
Other notes	These kind of roof lines shown below cannot be achieved using WOODEN trusses

ULTRA-SPAN OFFERS VARIOUS UNIQUE ADVANTAGES:

- Unlike Timber, Ultra-span is rolled off site to tight dimensional tolerances and does not warp meaning Roof lines always remain true and straight.
- Lightweight and compact for economical transportation costs with fast and easy erection.
- Span capability from small, low cost to large 35M clear span commercial structures.
- Members supplied in stock lengths or cut to size and ready for factory or site assembly in kit form.
- A Hand drill and cut-off saw is the only equipment needed for assembly.
- Longevity of product due to MRM's licensed ZINCAL coating system and inherent properties of steel non-combustibility, resistance to borers and Fungus attack.
