

PROJECT SHOWCASE

Date complete	2017
Project	MRM MARIAKANI PLANT EXPANSION PROJECT
GPS / location	MARIAKANI MOMBASA
Architect	NOORANI ENGINEERING CONSULTANTS
Roofing Contractor	STEEL STRUCTURES LTD
Roofing Material	COLOURPLUS AZ150 - 0.45mm (Specially developed colour finishes)
Developer	MABATI ROLLING MILLS LTF
Profile	COLORPLUS ROLLED IN TI SAFLOK700 PROFILE – CRIMPED AND STRAIGHT
Special features	<p>For the expansion of its Mariakani Plant, MRM showed faith and confidence in its own material by using Colorplus coated steel rolled into the very popular Saflok 700 profile. A special colour was developed for the project and once the material was ready, roll forming was done on site, ensuring that the special lengths of Saflok sheets required for the project were installed directly from the roll forming machine.</p> <p>Barely two years after the project commissioning, MRM Mariakani plant was officially opened in July 2017 and all the desired goals of fast construction, clean look and economy in construction were all achieved.</p>

ADDITIONAL NOTES:

A special colour finish, Sea-Spray, was developed for the main building areas and was punctuated tastefully with a Deep Ocean colour, to capture the corporate image of the Safal Group.

The project also made generous use of matching profile skylights to maximize on natural lighting which has been demonstrated to greatly improve the work-plan environment, positively impacting productivity and minimizing the possibility for accidents, thereby contributing to MRM's position as choice-employer in its class & demonstrating best-practices in its application of roofing & cladding.
